This book is a UK adaptation of a Mosby US text, Ebersole & Hess: Toward Health and Aging: Human Needs and Nursing Response. It outlines the theoretical foundations which underpin caring for elderly people, before moving on to consider the specific physiological and psychological problems that the elderly face and that those caring for them have to deal with. The latest research, theory and discussions of current practice are integrated throughout the book. The book acknowledges the diversity of older peoples' lives and the environment they inhabit in the UK. It also adopts a theoretical framework "Maslow's Hierarchy of Needs". This states that each individual has an innate hierarchy of needs that motivates all human behavior. These human needs have different priorities. When people achieve fulfillment of elementary needs, they strive to meet those on the next level until the highest order of needs is reached. Maslow's model is widely known and has been found particularly helpful in facilitating a holistic view of older people. * Adopts Maslow's Hierarchy of Needs model, helpful in facilitating a holistic view of older people. * Provides bridge between theoretical foundations of care and actual care provision. * Incorporates 115 illustrations which enhance the text and clarify concepts. * Provide Case Studies for real-life learning. * Includes Chapter Introductions and Chapter Summaries which point out main concepts and provide a useful revision tool. * Features Further Reading lists with the most current book and journal articles for additional information. Teaches students how to "think like an APRN" This book describes an innovative model for helping APRN students develop the clinical reasoning skills required to navigate complex patient care needs and coordination in advanced nursing practice. This model, the Outcome-Present-State-Test (OPT), encompasses a clear, step-by-step process that students can use to learn the skills of differential diagnosis and hone clinical

reasoning strategies. This method facilitates understanding of the relationship among patient problems, outcomes, and interventions that focus on promoting patient safety and care coordination. It embodies several levels of perspective related to patient-centered care planning, team-centered negotiation, and health care system considerations. Through patient stories and case scenarios, the text highlights care coordination strategies critical in complex patient situations. It provides students with the tools to collect patient information, determine priorities for care, and test interventions to reach health care outcomes by making clinical judgments during the problem-solving process.
