

DOWNLOAD RESEARCH ADVANCES IN ALCOHOL AND DRUG PROBLEMS VOLUME 6

Research Advances in Alcohol and Drug Problems.

This volume is the eighth in the Research Advances Series and the fifth published by Plenum Press. The purpose of the series is to review new work in rapidly changing fields. We do not expect reviews to cover the whole field of work on alcoholism and addiction. Nor do we expect that they will be like annual reviews covering all work in a delimited field. Our reviews are designed to explore only the most exciting parts of the total field and to focus on conclusions that can be made about them. The series publishes one volume each year. Volume 8 is an omnibus rather than a theme volume in that a wide range of topics is covered, including research on alcohol, opiates, and tobacco. As usual, the greater emphasis is on alcohol research, reflecting the importance of the problem and the volume of work to be reviewed. With Volume 8 come some changes in the Editorial Board. It will be the last volume in the series for Robert E. Popham who has resigned from the Board. He has been with the series since its inception and has contributed a great deal to its development. The members of the Board are grateful for his help. We are adding two new members: Dr. Howard Cappell, whose field is experimental psychology, and Dr. Edward M. Sellers, in clinical medicine and pharmacology.

Research Advances in Alcohol and Drug Problems, Volume 10

This book continues the series of reviews of research advances first published in 1974. The editors' aim here is to present critical and integrative reviews by internationally recognized scholars of areas in which there has been much recent research. In this task we have been greatly helped by the staff of Plenum Press and the Advisory Panel listed at the front of this volume. Several members of the Panel have retired: Dr. W.M.D. Paton, Dr. K. Bruun, Dr. K.F. Killam, and Dr. J.R. Seeley. Dr. Klaus Makela has accepted our invitation to join the Panel. Unfortunately, one member of the Panel, Professor William McGlothlin, died as a result of a tragic accident. He was a gifted and sensitive researcher. His work over many years was well known to those studying alcohol and drug problems. We want to acknowledge his contributions to the Research Advances Series and to the field in general. The editors wish to acknowledge the help of Julliana Newell Ayoub in preparation of this volume. This volume contains three papers by H. Fingarette, R. Room, and B. Kissin, on "The Disease Concept." They were originally prepared for an earlier volume but could not be included because of scheduling problems. The editors, and not the authors, are responsible for this delay. Because they are primarily philosophical and theoretical in nature they are not diminished in value by the lesser number of references to recent research.

Research Advances in Alcohol and Drug Problems

This is the tenth volume in the Research Advances series and the seventh published by Plenum Press. Volume 10 is another omnibus volume, providing specialized and advanced reviews in a number of areas related to the use of alcohol, illicit drugs, and tobacco. We include also a brief history of the Center for Alcohol Studies that gives Mark Keller's unique perspective on this noted institution. Two of the chapters are decidedly longer than the others—very long chapters have appeared occasionally in the past, and we think that it is one of the strengths of the series that we are able to accommodate such reviews. Again the editorial board has changed. After several years of service, Reginald G. Smart has stepped down. New to the board are Helen M. Annis, Michael S. Goodstadt, Lynn T. Kozlowski, and Evelyn R. Vingilis. This is likely to be the

sole volume for which Goodstadt is on the board, since before completion of this volume he moved from the Addiction Research Foundation to the Center for Alcohol Studies, Rutgers University.

Research Advances in Alcohol and Drug Problems, Volume 9

Over the last decade the world has experienced a growing interest in problems associated with the nonmedical use of drugs. This interest has corresponded to a real growth in the extent, diversity, and social impact of the use of alcohol and drugs in many societies. As a result, the amount of research and writing on the subject of drug problems has greatly increased, and it has become very difficult for one individual to keep up with all the relevant literature. There is thus an acute need in the field for critical reviews that assess current developments, and the present series is intended to fill this need. The series is not to be an "annual review" in the usual sense. The aim is not to cover all the work reported during the preceding year in relation to a fixed selection of topics. Rather, it is to present each year evaluative papers on topics in which enough recent progress has been made to alter the general scope in a particular area. Owing to the multidisciplinary nature of problems of drug use and dependence, the papers published in each volume will be drawn from several disciplines. However, some volumes may be devoted to one particular problem, with individual reviews and papers examining various aspects of it. The composition of the editorial board and the international advisory board reflects these objectives. The editors are members of the senior scientific staff of the Addiction Research Foundation of Ontario.

Research Advances in Alcohol and Drug Problems

This, the ninth volume in the series, appears some 13 years after the first. Like most of its predecessors, Volume 9 is deliberately eclectic, covering a range of topics that the editors think worthy of inclusion. Some of the chapters, such as the review of the literature on benzodiazepines, represent areas that have received relatively little attention in previous volumes—largely because the literature has not previously been "ripe" for review. Others represent literatures that have been reviewed in the past but which continue to advance in sufficient measure that their ripening never ceases. Shepard Siegel's contribution represents a relative rarity in previous volumes: a chapter not laden with a consideration of current empirical work, but a reflective essay designed to stir thought with some provocative ideas. The editors trust that readers will continue to find *Research Advances* to be an important repository of knowledge in the alcohol and drug fields.

The Editors Toronto IX Contents

1. THE HUMAN PHARMACOLOGY OF NICOTINE Neal L. Benowitz 1. Introduction 2. Nicotine in Tobacco Products 2 3. Pharmacokinetics of Nicotine 4 4. Nicotine and Cotinine Blood Levels during Tobacco Use 14 5. Intake of Nicotine during Cigarette Smoking 18 6. Biochemical Markers of Nicotine Intake 18 7. Regulation of Nicotine Intake during Cigarette Smoking 23 8. Pharmacology of Nicotine 28 9. Importance of Nicotine in Human Disease 41 References 45
2. BENZODIAZEPINES AS DRUGS OF ABUSE AND DEPENDENCE 53 Howard D. Cappell, Edward M. Sellers, and Usoa Busto 1.

Research Advances in Alcohol and Drug Problems

From the President of the Research Society on Alcoholism This annual book series is a valuable resource for the alcoholism field, because it provides critical and timely reviews of selected areas that have interest to both practitioners and researchers. It tries to achieve a balance between psychosocial and biomedical topics and between research and patient-care activities. Such a mix is offered in Volume 6. The Research Society on Alcoholism whose membership embraces researchers from all disciplines that study the etiology, treatment, and prevention of alcoholism and alcohol-related disabilities—regards the support and sponsorship of this book series as one of its major missions.

Ting-Kai Li, M. D. President, Research Society on Alcoholism

From the President of the American Medical Society on Alcoholism and Other Drug Dependencies The broadening scope of clinical and scientific interest in alcohol dependence is reflected in this sixth volume of *Recent Developments in Alcoholism*. It offers valuable reviews on important current issues in the field, namely, the intertwining of nature and nurture, a continuing search for predictors and indi

cators of the disease, and the social impact of alcoholism on the job and in special populations. This material should pique the interest of clinicians from all disciplines. Medical, social, and political planners also need to turn to the expanding body of knowledge in the field of chemical dependence reflected here. The volume is therefore of value to a contemporary readership and to those who will turn to it in future years.

Research Advances in Alcohol and Drug Problems

In this congressionally mandated study, an expert committee of the Institute of Medicine takes a close look at where treatment for people with alcohol problems seems to be headed, and provides its best advice on how to get there. Careful consideration is given to how the creative growth of treatment can best be encouraged while keeping costs within reasonable limits. Particular attention is devoted to the importance of developing therapeutic approaches that are sensitive to the special needs of the many diverse groups represented among those who have developed problems related to their use of "man's oldest friend and oldest enemy." This book is the most comprehensive examination of alcohol treatment to date.

Research Advances in Alcohol and Drug Problems

Over the last decade the world has experienced a growing interest in problems associated with the nonmedical use of drugs. This interest has corresponded to a real growth in the extent, diversity, and social impact of the use of alcohol and drugs in many societies. As a result, the amount of research and writing on the subject of drug problems has greatly increased, and it has become very difficult for one individual to keep up with all the relevant literature. The editors are members of the senior scientific staff of the Addiction Research Foundation of Ontario.

Recent Developments in Alcoholism

Heavy Drinking informs the general public for the first time how recent research has discredited almost every widely held belief about alcoholism, including the very concept of alcoholism as a single disease with a unique cause. Herbert Fingarette presents constructive approaches to heavy drinking, including new methods of helping heavy drinkers and social policies for preventing heavy drinking and the harms associated with it.

Research Advances in Alcohol and Drug Problems

The previous volume, *The Pathogenesis of Alcoholism: Psychosocial Factors*, attempted to describe the interaction of biological, psychological, and social factors that lead to the initiation and perpetuation of alcoholism. The preface to that volume presented our particular view of the bio-psycho-social interaction as a progressive process in which earlier developments produce new pathogenetic mechanisms, which in turn lead to still other cyclical feedback activities. Although influences from each of the three phenomenologic levels are at work during each stage of the clinical course, it would appear that social factors are most significant in the early phase, psychological factors at the intermediate level, and biological ones toward the end. These differences are only relative, however, for influences of all three types surely are operative during all stages of the syndrome. This appears to be particularly true for the biological parameters of activity. Don Goodwin (1976), who has supplied much of the data that support the role of hereditary factors in alcoholism, is wont to say that all living behavior is biological-by definition. The operational evidence for this is perhaps more evident in alcoholism than in other syndromes. For example, the general social indifference of many Asians to alcohol may reflect the presence of an atypical isoenzyme of alcohol dehydrogenase rather than some independently derived cultural norm.

Alcohol and Drug Abuse Curriculum Guide for Pharmacology Faculty

Neurobiology of Addiction is conceived as a current survey and synthesis of the most important findings in our understanding of the neurobiological mechanisms of addiction over the past 50 years. The book includes a scholarly introduction, thorough descriptions of animal models of addiction, and separate chapters on the neurobiological mechanisms of addiction for psychostimulants, opioids, alcohol, nicotine and cannabinoids. Key information is provided about the history, sources, and pharmacokinetics and psychopathology of addiction of each drug class, as well as the behavioral and neurobiological mechanism of action for each drug class at the molecular, cellular and neurocircuitry level of analysis. A chapter on neuroimaging and drug addiction provides a synthesis of exciting new data from neuroimaging in human addicts — a unique perspective unavailable from animal studies. The final chapters explore theories of addiction at the

neurobiological and neuroadaptational level both from a historical and integrative perspective. The book incorporates diverse findings with an emphasis on integration and synthesis rather than discrepancies or differences in the literature. · Presents a unique perspective on addiction that emphasizes molecular, cellular and neurocircuitry changes in the transition to addiction · Synthesizes diverse findings on the neurobiology of addiction to provide a heuristic framework for future work · Features extensive documentation through numerous original figures and tables that will be useful for understanding and teaching

Recent Developments in Alcoholism

Research skills are as critical to social work practitioners as skills in individual and group counselling, policy analysis, and community development. Adopting strategies similar to those used in direct practice courses, this book integrates research with social work practice, and in so doing promotes an understanding and appreciation of the research process. This second edition of *Practising Social Work Research* comprises twenty-three case studies that illustrate different research approaches, including quantitative, qualitative, single-subject, and mixed methods. Six are new to this edition, and examine research with First Nations, organizing qualitative data, and statistics. Through these real-life examples, the authors demonstrate the processes of conceptualization, operationalization, sampling, data collection and processing, and implementation. Designed to help the student and practitioner become more comfortable with research procedures, *Practising Social Work Research* capitalizes on the strengths that social work students bring to assessment and problem solving.

Recent Developments in Alcoholism

Behavior therapists on child and adolescent psychiatric inpatient units have played an increasing role in the treatment of a wide range of disorders. Indeed, behavioral assessment and treatment strategies in these settings have been applied to a diversity of problems, including depression, mental retardation, autism, conduct disorders, attention deficit hyperactivity disorder, anorexia, and bulimia. More recently, the heuristic value of behavioral methods with substance abuse, pediatric pain, and child maltreatment has been documented as well. Because of the multifaceted and complex challenges posed by children and adolescents who reach inpatient units, behavioral clinicians have worked closely with other professionals (e. g. , psychiatrists, social workers, psychiatric nurses) in an effort to provide broad-spectrum, comprehensive intervention. However, as a burgeoning body of clinical research attests, the significant contribution of behavior therapy to successful treatment outcome is now indisputable. Yet, surprisingly few texts have been published concerning inpatient treatment of children and adolescents. The few extant efforts in this area have not covered the broad array of issues and diagnostic populations treated, nor have they considered the pragmatic day-to-day difficulties encountered by behaviorally oriented practitioners working in child and adolescent inpatient settings. This text is an attempt to remedy such shortcomings by providing a comprehensive yet practical approach to the functions of behavior therapists on inpatient psychiatric services for children and youth.

Broadening the Base of Treatment for Alcohol Problems

Both timely and topical, this book examines the most important aspects of the relationship between alcohol consumption and health. Drawing together much new and exciting work in this area, it reviews this emotive subject from a dispassionate perspective. It will provide a firm base for further research into the effects of alcohol on the cardiovascular system, and into public health attitudes to what is both a universal pleasure and problem.

Alcohol and Drug Abuse Curriculum Guide for Pediatrics Faculty

Examines the scientific evidence that cigarettes and other forms of tobacco are addicting. Concludes that processes that determine tobacco addiction are similar to those that determine addiction to other drugs such

as heroin and cocaine. Tables and figures. Bibliography. Index.

Research Advances in Alcohol and Drug Problems

Volumes 7 and 8 of the Handbook were published in 1977. In Volume 7 methods for studying unconditioned and conditioned behavior were reviewed. Attention was given to both ethological methods and operant conditioning techniques as applied to some selected aspects of behavior. Genetic, developmental, and environmental factors influencing behavior were also discussed. In Volume 8, neurotransmitter systems, and in particular brain circuits, were discussed in relation to behavior and to the effects of psychoactive drugs on behavior. The coverage was not exhaustive because of space limitations. The topics selected for review were, at the time, the focus of considerable experimental effort; they included homeostasis-motivated behaviors: sleep, locomotion, feeding, drinking, and sexual behavior. Brain dopamine systems were therefore discussed in depth, since they were already known to be centrally involved in motivated behaviors. Learning mechanisms and emotion were reviewed in the remaining chapters. In 1984 we initiated an update of behavioral pharmacology to review areas of progress within the same scope as the earlier volumes. This update continues in Volume 19. Among the contributions are several that represent important advances in analyzing behavior and the use of more sophisticated methods to define the effect of drugs on particular aspects of behavior. The chapters by Blundell on feeding and Miczek on aggression illustrate the sophistication of modern ethopharmacology.

Heavy Drinking

In this newly revised edition, Philip J. Flores, a highly regarded expert in the treatment of alcoholism and in group psychotherapy, provides you with proven strategies for defeating alcohol and drug addiction through group psychotherapy. For the first time, practical applications of 12-step programs and (ital) psychodynamic groups are jointly explored, jointly explained, and jointly brought into therapeutic use. You'll examine the constructive benefits of group therapy to chemically dependent individuals--opportunities to share and identify with others who are going through similar problems, to understand their own attitudes about addiction by confronting similar attitudes in others, and to learn to communicate their needs and feelings more directly. Group Psychotherapy with Addicted Populations covers the key areas of group psychotherapy for chemically dependent persons including: alcoholism, addiction, and psychodynamic theories of addiction alcoholics anonymous and group psychotherapy use of confrontational techniques in the group inpatient group psychotherapy characteristics of the leader transference in the group resistance in groups preparing the chemically dependent person for group the curative process in group therapy Along with his powerful chapters that emphasize the positive and constructive opportunities group psychotherapy brings to the chemically dependent individual, Flores has added these new sections: integrating a modern analytic approach a discussion of object relations theory group psychotherapy, AA, and twelve-step programs diagnosis and addiction treatment treatment issues at early, middle, and late stages of treatment a discussion of guidelines and priorities for group leaders countertransference special considerations of resistance to addiction termination of treatment Those working in group therapy will find this expanded second edition a valuable resource for better recognizing and serving their group members'needs, and they will feel a sense of fulfillment as Flores reaffirms the positive effects of group psychotherapy.
